1988

The inventions set forth in claims 1 to 3, 6, and 17 are disclosed in documents 1 to 4 cited in the international search report, and thus, lack novelty.

Documents 1 to 4 disclose methods for manufacturing a fiber-reinforced thermoplastic resin by mixing reinforcing fibers into a polymerizable monomer from which can be formed a thermoplastic resin, and then polymerizing the monomer; document 1 discloses the use of a depolymerizable thermoplastic polyurethane, document 2 discloses the use

of a thermoplastic polyimide precursor, and documents 3 and 4 disclose the use of lactam compounds.

The invention set forth in claim 7 is disclosed in document 2 cited in the international search report, and thus, lacks novelty. Document 2 discloses a method using a polyimide precursor.

The invention set forth in claim 8 is disclosed in document 1 cited in the international search report, and thus, lacks novelty. Document 1 discloses a method using a depolymerizable polyurethane.

Claims 1 to 17 do not involve an inventive step in the light of documents 1 to 4 and documents 5 to 8 cited in the international search report. A person skilled in the art could easily conceive of applying the technical concept of mixing reinforcing fibers into a polymerizable monomer from which can be formed a thermoplastic resin, disclosed in documents 1 to 4, to the manufacture of a known fiber-reinforced thermoplastic resin, such as one disclosed in documents 5 to 8.
